

One verified feed, only when the city needs it

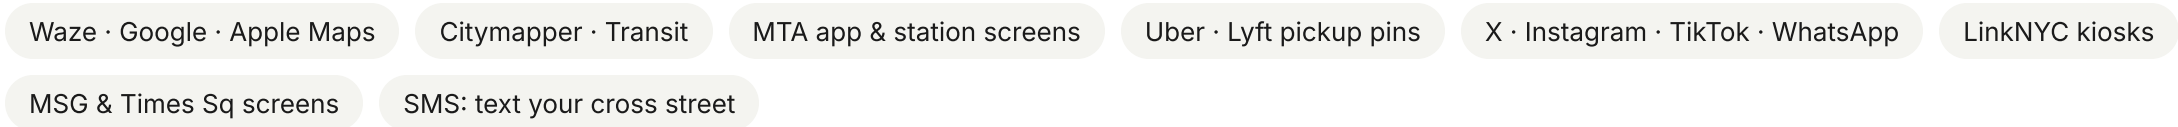

A city-sponsored data API that turns official alerts, transit load and social signals into verified closures and smarter routes home, then delivers them inside apps people already use.

ONE FAN LEAVING MSG AFTER THE FINAL BUZZER

DELIVERED THROUGH CERTIFIED SPONSORS

The one rule
The feed is live only during a declared event. It keeps aggregates, never profiles. When the event ends, raw social data is deleted and every decision stays in a public audit log.
